SESSION 5 · MON 10/5 · 6:00 TO 9:00 PT · THE FLOW, TOP TO BOTTOM

REPO: WORK THE PAGE · LECTURE: YOU, 2 MIN · PRESENTATIONS · POLL / CHAT
BLACK NUMBER: NEVER SKIP · RED: STOP BY

6:00 — 1 — ZOOM
OPEN. "Setup questions at the break."
Correction: **the AI-search reading could not be opened from the build**; the page carries one recommendation from it at medium confidence (who-what-where). Say what else it says if you have read it.

6:03 — 2 — §00
OBJECTIVE. Read "Session 5's one thing" off the page: explain it, break it, improve it, say what stays yours.
Non-advisors: "the workflow you were handed is still someone's recurring task." The Coles in two lines, aloud.

6:05 — 3 — §00
BRIDGE: three letters, all b by content (positions vary). Then Advance the model three times.
The box changes, the ring of five does not. Click **5 Hand it over**; read the one thing.

6:09 — 4 — COLD OPEN
POLL 1 **Then or Now? Click Then, Test 1 · check both, Test 2 · could you send it?**
Then 3 of 8 and names the client; Now 8 of 8. Land: "good and allowed are two tests; the course is the gap between Then and Now."

6:17 — 5 — §01
Pin A, drag to today: deprecated, 57 days. Past 30 Nov: retired, requests fail H. Pin C: untested. Then drag gate B + rule 2 onto the skill card, Advance the model ×4.
Stamps: STOPPED, RUNS, RUNS, STOPPED + HELD 4 OF 5. Land: "a gate names what may run; a scorecard names what right looks like; approve once per release."

6:22 — 6 — §02 WORKED
Tag the five choices; Model tier and Data handling: NOT STATED; Verification: WEAK. Copy the explanation. Then drag the eight loose files: three PDFs → one prompt.txt, docx → README.txt, email + chat link out.
"Minute one of every talk is these four lines; the package that let a stranger run yours was one README and one zip, not eight attachments."

6:28 — 7 — §03 WORKED
POLL 2 **which break? Lock my prediction, Run all six: 2, 4, 5 broke.**
GATE 1 "Which break was not the model's fault?" Input 5: it repeated what it was given. Land: "the input is the finding."

6:33 — 8 — §04
Three rows, the room calls a or b; checkable: NOT IN NOTE · CONFLICT heading · the README step with the eight-digit test.
3 of 6 becomes 6 of 6 and the strip runs the improved version through five stations. Land: "a model cannot be careful; it can follow a rule you can test."

6:38 — 9 — LECTURE 1
What to listen for in the next hour. PAGE 2, L1
Four things per talk: what it is made of, the input that broke it, the change and its proof, what stays human. **STOP 6:40.**

6:40 — 10 — BLOCK 1
PRESENTATIONS 1 to 4. Ten minutes each: six, the builder's two, your questions. PAGE 2, P
Stop a presenter at seven minutes, kindly. GATE 2 to each builder: "what did they understand that you never wrote down?"

7:20 — 11 — BREAK
BREAK. Post "back at 7:35 Pacific" in chat.
Post the clock time in their zone, not yours. **Break starts by 7:20** or block 2 runs into §05.

7:35 — 12 — BLOCK 2
PRESENTATIONS 5 to 8. Same rules. PAGE 2, P
A presenter who could not run it presents where it stopped: valid, and the finding is about the package. **STOP 8:15.**

8:15 — 13 — §05
POLL 3 **how much faster? Lock my guess, Reveal the four trials: +40, +25.1, +14, and minus 19. Click METR: the five lines of what it measured.**
"They believed plus 20; they were minus 19." The room's sliders at the defaults: saves 45 a time, 6 hours a month; drag checking up and the saving vanishes. Land: "felt faster is not faster; time it."

8:20 — 14 — §06
WIRE THE DESK. Drag The meeting + A vendor's servers onto the note-taker (42.9% of 2,906; 14 tools); Your public pages + The open model's index onto AI search (8% v 15%).
Four answers write when both ports are right; a wrong one shakes and says why. The room calls the other three. Land: "the questions do not change; the answers do."

8:25 — 15 — §07
ONE REPOSITORY, EVERY DESK. Click the Cole prep question: four skills light, nobody named one. Click the transcript question: six. Push an update: six desks take v1.5.
Drag the unapproved plugin onto the policy: "blocked by enterprise policy". Land: "your project was one of these; a firm keeps fifteen in a repository and ships them like code; the adviser types the question."

8:30 — 16 — §08
Eight moments, the room calls 1 or 2: tool 1, 4, 6, 8; you 2, 3, 5, 7. Then RANK THE REASONS as the room calls them, Lock my order, Show the survey's order.
32% advice, 21% relationship, 17% cost, 11% returns, 10% alone, 9% communication; Vanguard's half; the exam's 7%. Land: "the judgments are the fee."

8:35 — 17 — §09
Two commits, both b. GATE 3 **"which confidence predicted more checking?" Yourself: plus 0.26; the tool: minus 0.69.**
The two sliders, then **Seal it**: one line each in chat, the five principles open.

8:40 — 18 — LECTURE 2
The tools change; the judgment does not. PAGE 2, L2
Two minutes: the calendar in §01 against the ring in §00. **STOP 8:42.**

8:42 — 19 — CLOSING
CLOSING CHECK, written. CHAT **one line each: explain, break, improve, keep.**
Read three aloud. A line with no "stays yours": name §08.

8:47 — 20 — E5 IF TIME
POLL 4 **sealed vote → 2 · Weigh both cases → 3 · The complication →** POLL 4 **again → 4 · Vote again.**
Depth → **+ Standard**. If no time, one sentence: "the two pans may be one pan."

8:52 — 21 — ZOOM
CLOSE. Improved versions back to each builder; where the course materials live; thanks.
End 8:54; six minutes of buffer.

SETUP AT 5:45

- **Tab 1** Session 5, Core only, depth bar at + Standard for E5 later
- **Tab 2** the pairing list from Session 4: who presents whose package
- Four polls built from `session-5-polls.md`
- Three chat lines ready: the break time, the closing check, the one-thing line
- Speaker labels on; a visible clock

NOT TONIGHT

- Live demonstrations of any workflow
- E1 to E4 on the page (theirs, after)
- Vendor names for note-takers or CRMs
- Any date, weight or platform
- Anything with a real client in it

CHECKPOINTS

- **6:40** §04 done, presenter 1 on
- **7:20** block 1 done, break
- **8:15** block 2 done
- **8:42** closing check

DROP ORDER IF LATE

- 1 §02's file sort (saves 2)
- 2 §07 to one question (saves 3)
- 3 §06 to one tool (saves 3)
- 4 E5 to the one sentence (saves 5)
- 5 §04 to one row (saves 3)
- **Never drop:** objective, cold open, §02, §03, the presentations, the closing check

ANSWERS

- Bridge: all b · cold open: Then 3, Now 8 · §01: retired after 30 Nov; B + 2 is the pair with no failure
- §02 files: PDFs → zip as prompt.txt, docx → README, email + link out · §03: 2, 4, 5 broke · §04: 6 of 6
- §05: +40, +25.1, +14, minus 19 (believed +20) · §06: meeting→vendor, file→vendor ×2, you→plan, pages→index · §08: tool 1 4 6 8, you 2 3 5 7; rank 32 21 17 11 10 9
- §09: b, b · E5: no right answer

P · 6:40 AND 7:35 · 40 MIN EACH — The presentations: eight, ten minutes each

1. **Order.** The pairing list from Session 4: nobody presents their own package and no two present each other's. Call the next name while the builder is still answering.
2. **Six minutes, five beats** (E1 is their rehearsal): what it does and the problem; the design choices (tool, tier, prompt structure, checks); where it worked and the input that broke it; what they changed and why; one thing they take. Stop at seven minutes.
3. **The builder's two minutes** (E4's order): understood first, missed second, what the package never said last. GATE 2 "What did they understand that you never wrote down?"
4. **Your two to four questions**, at least one to the builder: "Which input would you add to the test set?" · "Which model and date is in the record?" · "What stays yours in this workflow?" · to the builder: "What did the runner try that you did not anticipate?"
5. **Could not run it.** A presenter who could not run it from the documents presents exactly where it stopped. Valid; the finding is about the package. Session 4's seven stations are the vocabulary.
6. **No live demonstrations.** If someone offers, "the talk is the evidence; the transcript is with me."

L1 · 6:38 · 2 MIN — What to listen for in the next hour

- **Four things per talk**, the four the page just taught: what it is made of (§02), the input that broke it (§03), the change and the input that proves it (§04), and what the builder kept human.
- **Listen for the tier.** If a presenter names a model and the package did not, that is a package gap, not a presenter error; say so at the builder's turn.
- **The question you will ask every time:** "which input would you add to the test set?"

L2 · 8:35 · 2 MIN — The tools change; the judgment does not

- **§01's calendar** against **§00's ring**: every model on the calendar has a date; none of the five stops does. Sonnet 4.5 was deprecated two days after Session 4 [H]; the four questions did not change that night.
- **What the course leaves them:** the eight checks (Session 1), the four parts of a prompt (2), the opened source (3), in-where-check-keep (4), and the handoff test (5). Say the five in one breath.
- **The one sentence to a client** (E5's output): what you do that the tool does not. Ask two people for theirs.

F · §01 RUN FLOW — Click every pin, then drag

- **A**, today: deprecated since 30 Sep, retirement 30 Nov, replacement named. Drag past 30 Nov: retired; "requests to retired models will fail".
- **B**: active, not sooner than 28 Sep 2027 (Sonnet 5.5); "still write the date you tested it".
- **C**: runs on whatever is current, untested. Then the gate and the scorecard: drag **B** and **2** onto the card, Advance ×4: STOPPED (names Sonnet 5.5), RUNS, RUNS, STOPPED + HELD 4 OF 5. **A** + **1** if asked: RUNS, FAILS, FAILS, FAILS.

G · CUES — Three gated questions and the closing line

- GATE 1 §03: "which break was not the model's fault?" Input 5.
- GATE 2 each builder: "what did they understand that you never wrote down?"
- GATE 3 §09: "which confidence predicted more checking?" Yourself.
- **Closing check, written:** explain, break, improve, keep. Read three aloud.

H · FOR YOU — Verify before teaching

- Open Anthropic's model deprecations page and models overview once (the §01 calendar, both H, opened 4 Oct). The five Claude Code documentation pages behind §07 and §01's gate were opened 4 Oct (H); the firm on the page is invented. Everything else external is M and listed in the run sheet's Verify section: the four trials, Morningstar, Vanguard, the CFP exam weight, the planning agent, Pew, OpenAI, the Kitces reading.
- Lee et al. (§09, E5) was opened in full: Table 4's coefficients and §5.1's shares.
